

Create an Apps contains 3 screens using swift for iOS / kotlin or java for Android

1. Login screen
2. Home screen
3. Create screen

Requirement:

1. Create login function, for username: user and password: 12345, then the application will go to home screen,
2. On the home screen click on the icon "Buat Event" then will go to Create Event screen.
If there's no event, it will show blank list,
If there are upcoming event, display the list as per mockups
3. Rule on Create event screen:
 - a. Please use text field on Nama, lokasi event, deskripsi, peyelenggara
 - b. Please use datepicker on tanggal event
 - c. Please create image upload function for gambar event. And show selected image on the screen
 - d. Save all data using local DB which you master the most e.g (core data for iOS, rooms or SQLite for android), and show it on home screen.
4. Create the apps within 3 days. Zip file project with format {nama}-sample-apps.zip and send it to robert.maramis@sg-edts.com
